# Office Action Summary

**Application No.**

10/687,987

**Applicant(s)**

CORMACK ET AL.

**Examiner**

Jason Thomas

**Art Unit**

2423

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 01 February 2011.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-3.5-11, 13-17, 19-22, 24-28 and 30 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-3.5-11, 13-17, 19-22, 24-28 and 30 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-946)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed February 1, 2011, have been fully considered but they are not persuasive.

Applicants' argue that, neither the Chang or Agnihotri reference teach, "a video processor to generate character images of the translated text data" (see pg. 7) and further argues that while, "Agnihotri simply states that translated text data is displayed", "Agnihotri provides no disclosure of how the translated text data is displayed. It is reasonable to expect that translated closed caption data is generated and embedded into the VBI" (Ibid). Further, applicants argue that Agnihotri does not disclose, "a video processor to... superimpose the character images over images of a video portion of the video signal" (Ibid.). The examiner disagrees.

While Agnihotri is not explicit about how microprocessor 24 generates the translated text, the text comprising "character images of the translated text data" is implicitly generated as the translated text data is correlated to the related video and sent after processing at microprocessor 24 directly for display at display 40. This reads on a video processor (i.e. microprocessor 24) which "generates", in that Agnihotri teaches wherein such a transcription system can be embodied as a STB such that the display 40 which receives the output of processor 24, containing the text across line 46, is just a television with no processing capability. Furthermore, while the examiner can appreciate the differences between the reference of record and that of the instant application, the

act of synchronizing, by microprocessor 24, the translated text data, along line 46, with the related video component, along line 18, such that they are transmitted across said lines 46 and 18 from the microprocessor to a television display 40 for simultaneous presentation by said display reads on "superimposing."

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 5-11, 13-17, 19-22, 24-28 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang, U.S. Patent No. 5,543,851, in view of Agnihotri et al., WO 03/030018 A1 (hereinafter Agnihotri).

**Regarding claims 1, 5, 7, 14 and 20:** Chang discloses an apparatus and a method of using an apparatus executing software code using a processing unit (see [col. 3, ll. 42-53]) comprising: a video receiver for receiving a video signal with encoded text data (see [abstract], [fig. 1], [fig. 2], [fig. 9], [col. 1, ll. 32-35], [col. 1, ll. 49-53], [col. 2, ll. 32-53]); a decoder for decoding the encoded text data (see [abstract], [fig. 1 item 20], [fig. 2 and 8 item 32], [col. 1, ll. 11-16], [col. 1, ll. 49-53]); a text translator for processing the decoded text data to generate character images representing the decoded text data (see [abstract], [fig. 5b], [col. 1, ll. 58-67], [col. 3, ll. 23-35], [col. 3, ll. 42-53], [col. 4, ll. 9-16], [col. 4, ll. 44-

47], [col. 5, ll. 43-46] for processing the text to obtain a translation and generating character images to be displayed on the screen to represent the caption data); and a video processor to generate character images of the closed caption data with a video portion of the video signal for display (see [abstract], [fig. 4 item 410], [figs. 5a & 5b], [fig. 9], [col. 2, ll. 65-66], [col. 4, ll. 20-26], [col. 4, ll. 40-50] for a processor which combines the text with the video for display which inherently requires video processing to accomplish) however, Chang is silent on superimposing the translated text data in the form of character images over images of a video portion of the video signal for display.

Agnihotri teaches an apparatus which can be operated by executing a set of programmable instructions where said apparatus among other things is capable of translating text data, filtered from an audio/video signal, into a target language and displaying the translated text data while simultaneously playing the audio/video component of the synchronized signal (see [abstract], [pg. 3, ll. 19-29], [pg. 6, ll. 27-30], [pg. 8, ll. 4-9]).

At the time the invention was made, it would have been obvious to one of ordinary skill in the art to use an executable code to instruct an apparatus which displays translated text, synchronized to be displayed together on the same display, with video, as taught in Agnihotri, when creating a system capable of translating text as instructed by a processing unit, as taught in Chang, because superimposing the translated text on the active video which is being played and watched by a viewer allows him or her to watch the video and read the

translation simultaneously without having to alternate their attention between the two (see [pg. 2, ll. 10-17]).

**Regarding claim 25:** Chang in view of Agnihotri discloses a wireless video receiver (see Chang: [col. 2, ll. 42-48], [col. 7, ll. 6-11] for a wireless video receiver) comprising: a video receiver to receive a video signal with encoded text data (see Chang: [abstract], [fig. 1], [fig. 2], [fig. 9], [col. 1, ll. 32-35], [col. 1, ll. 49-53], [col. 2, ll. 32-53]); a decoder to decode the encoded text data (see Chang: [abstract], [fig. 1 item 20], [fig. 2 and 8 item 32], [col. 1, ll. 11-16], [col. 1, ll. 49-53]); a text processor to process the decoded text data (see Chang: [abstract], [fig. 5b], [col. 1, ll. 58-67], [col. 3, ll. 42-53], [col. 4, ll. 9-16], [col. 4, ll. 44-47], [col. 5, ll. 43-46] for processing the text to obtain a translation); and a video processor to combine the translated text data with a video portion of the video signal for display (see Chang: [abstract], [fig. 4 item 410], [figs. 5a & 5b], [fig. 9], [col. 2, ll. 65-66], [col. 4, ll. 20-21], [col. 4, ll. 40-50] for a processor to combine the text with the video for display).

**Regarding claim 2:** Chang, in view of Agnihotri, discloses wherein the encoded text data comprises closed caption data (see Chang: [abstract], [fig. 2 and 8 item 32], [col. 1, ll. 31-38], [col. 2, ll. 34-38]).

**Regarding claim 21:** Change in view of Agnihotri, discloses wherein decoding the text data comprises extracting a text data packet from a video transport stream of the video signal (see Agnihotri: [pg. 3, ll. 19-27], [pg. 4, ll. 25-30] for extracting text data from a video stream).

**Regarding claims 3, 10, 11 and 28:** Chang, in view of Agnihotri, discloses wherein the text translator further comprises a dictionary and a processor to apply the decoded text data to the dictionary to correct and translate the text data and to obtain the processed text data (see Chang: [abstract], [fig. 5b], [col. 1, ll. 58-67], [col. 4, ll. 9-13], [col. 5, ll. 43-46], [col. 5, ll. 55-57] for a dictionary or a memory storage of definitions used for correcting and translating the text data thus able to obtain the processed data).

**Regarding claims 13, 19, 24 and 30:** Chang, in view of Agnihotri, discloses wherein the video processor encodes the translated text into text data and substitutes the encoded translated text data for the encoded text data of the received video signal (see Chang: [abstract], [fig. 4 item 410], [figs. 5a & 5b], [fig. 9], [col. 2, ll. 65-66], [col. 4, ll. 20-21], [col. 4, ll. 40-50] where the microprocessor displays a video image using a display signal which can be displayed with or without the processed caption text which inherently requires inserting the processed text data into the display signal thus combining the character images over the video image signal; see also Agnihotri: [abstract], [pg. 6, ll. 27-30] for said text data being translated text data).

**Regarding claims 8, 15 and 26:** Chang, in view of Agnihotri, discloses wherein the decoder reads data from a vertical blanking interval of the video signal (see Chang: [col. 3, ll. 5-12] where the data is read by the decoder from the conventional VBI).

**Regarding claims 9, 16 and 27:** Chang, in view of Agnihotri, discloses wherein the decoder comprises a digital video transport stream decoder (see Chang: [fig. 1 item 16], [col. 2, ll. 48-58], [col. 3, ll. 13-16], [col. 7, ll. 20-22] for a tuner capable of decoding a video transport stream).

**Regarding claims 6, 17 and 22:** Chang teaches the use of a dictionary (see [fig. 5a, 528]) but does not explicitly teach the use of a phrase dictionary.

Agnihotri, however explicitly teaches wherein translating text data comprises applying phrases in the decoded text data to a phrase dictionary (see [abstract] for language databases which include a metaphor interpreter; see also [col. 2, ll. 26-29], [col. 3, ll. 30-32], [col. 5, ll. 27-31]).

At the time the invention was made, it would have been obvious to one of ordinary skill in the art to interpret phrases, as taught in Agnihotri, to assist in the interpretation closed caption data, as taught in Chang, because by interpreting a phrase rather than a literal translation the information conveyed will be less likely to be out of context (see [pg. 2, ll. 10-14]).

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Thomas whose telephone number is (571) 270-5080. The examiner can normally be reached on Mon. - Thurs., 8:00 a.m. - 5:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Koenig can be reached on (571) 272-7296. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
